

LITTER BUG

You've spotted it before--litter on the side of the road, walk to school or on a hike. Litter is not only an eyesore, it also poses a threat to wildlife, natural ecosystems and human health and safety. If litter is so awful, why do people litter? What story does the trash people leave behind tell?

PEOPLE POWER

1-SIDED

Trees are the largest members of the plant kingdom and can be found in our day-to-day lives. Describe three products made from trees. How might you reduce your use of these products?

PEOPLE POWER

ELECTRIFYING

Turning on lights uses energy. The majority of energy is sourced from coal, which is harvested from the ground. How can you reduce your use of energy? Describe other sources of energy. How can you help preserve the land or create natural areas?

PEOPLE POWER

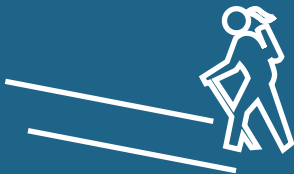

CONSTRUCTION ZONE

The clearing of land reduces habitat for animals making it difficult for them to find shelter or food. Is your area welcoming to birds? What materials are available for birds to nest? Where might they find food?

PEOPLE POWER

PATH LEAST TRAVELLED

It can be fun to feel adventurous and go off trail. However, off-trail hiking compacts the ground and can harm plant life and wear away soil in unintended areas.

PEOPLE POWER

IMAGINE EARTH

Every community is unique. What in your community is keeping it from being green or nature-friendly? Ask neighbors about challenges they have observed or experienced. What are solutions to the challenges you have identified?

PEOPLE POWER

SPRAYED ON

People sometimes resort to pesticides and fertilizers to keep their lawns green and gardens blooming. During rainfalls, chemicals wash into waterways harming fish and insects that call the area home.

What are alternatives to pesticides, fertilizers and weed killers?
